Air Springs For Buses (Bellows)

The connection ends have a constricted opening (conus throat) which allows the bellow to easily fit on or disassemble off plates and pistons at suitable diameters. These types of air suspensions bellows are preferred on buses and light commercial vehicles.

Lift Axle Bellows (Convolute Air Springs)

Made up of one or more convolutions, these air bellows are used on a very wide range of applications. In general they are used on multi-axle vehicles as an axle-lifting bellow when the vehicle is empty in order to protect the wheels. Convolute bellows are easy to assemble and primarily long-lasting.

Service Assembly (Air Springs Without Piston)

Service Assembly type bellows are primarily used on trailers, semi-trailers and tractors. It is produced by vulcanizing or crimp assembling a connection piece (plate) on the top end of a rolling lobe air spring.

Tractor (Trucks) Air Springs (Service Assembly & Complete)

Used as the prime assembly or as spare part on tractors. These types are produced as complete air springs by attaching a composite or steel piston to the bottom of a service assembly air spring.

Trailer Air Springs (Service Assembly & Complete)

They are service assembly or complete air springs used on trailers.

Cabin Air Springs

In adverse road conditions, cabin air bellows primarily reduce the level of vibration transmitted to the driver's cab. In this way, reduces the driver's fatigue level on long journeys.

Seat Air Springs

Seat bellows provide less exposure to the conditions of the road, providing increased ride comfort, and thus holding the vehicle drivers performance at the highest level.

Air Springs For Pickup Trucks,Suv's And Customized

Tapered and predominantly convoluted type air springs used on light commercial vehicles, pick-up trucks and SUV's allow the adjustment of the desired ride height. Items in this category are usually sold as air suspension kits fully-equipped with necessary parts and components.

Air Springs For Railway Systems

These are large diameter convoluted air springs which are used in nowadays advancing rail system technologies. These air springs have special properties which improve the riding performance of trains in many ways.

Air Springs For Agricultural Machinery And Vehicles

Applications for this type of air suspension bellows range from different machinery and vehicles used in harvesting to general agricultural tasks.

Bellows Used for Industrial Applications

Used for many industrial applications such as carpet extraction (squeezing) machines, industrial washing machines and industrial dishwashers, all of which need vibration isolation and shock prevention provided by the air springs. .

Air Springs for Construction & Heavy Machinery

Connect Air Springs is our most well-known brand air suspension bellows in the domestic and international markets which its production accounts for 60% of total production figures and is currently in a distribution network in over 60 countries on 5 continents making it a global brand as replacement parts with OEM quality.
