WHITE LINE

MUDGUARDS

Parlok White Line Mudguards for Commercial Vehicles

Made from High Density Polyethylene, HDPE
Accurately controlled material thickness
Tested heat resistance from -50°C to +80°C
Good chemical resistance
Matt surface finish means resistant to scratches
Does not require painting
Strong, flexible and light in weight
Easy installation
Easy fitting of spray suppression
Integrated spray suppression also available
Wide range of models and sizes
High resistance to impact

Parlok White line Kotflügel für Fahrzeuge

Hergestellt aus Hochverdichtetem Polyäthylen (HDPE)
Homogenes Material und gleiche Wandstärke
Permanente Kontrolle der Qualität
Erprobte Widerstandsfähigkeit
bei Temperaturen von -50°C bis +80°C
Widerstandsfähige, mattschwarze Oberfläche
Keine Lackierung nötig
Leicht, hart und flexibel ohne Bruchgefahr
Einfach zu montieren
Einfache Montage von Spritzschutzsystemen
Mit Spritzschutzsystem lieferbar
In verschiedenen Formen und Abmassen lieferbar
Hohe Bruch- und Stossfestigkeit

Ailes Parlok White Line pour véhicules industriels

Réalisées en polyéthylène haute densité (HDPE)
Épaisseur du matériau contrôlée avec précision pour une surface sans contraintes
Résistance aux températures extrêmes testée de -50°C à +80°C
Bonne résistance aux produits chimiques
Finition de surface mate pour une bonne
Résistance aux éraflures
Ne nécessite pas de peinture
Solides, flexibles et légères
Installation aisée
Montage facile des bavettes anti-projections
Versions avec bavettes anti-projections intégrées disponibles
Large gamme de modèles et dimensions
Haute résistance aux chocs

I.O.

CONVERSION LIST TYRE / MUDGUARD
UMSCHLÜSSELUNGSLISTE REIFENGROÖBE / KOTFLÜGEL
TABLEAU CORRESPONDANCE PNEUMATIQUE / AILE

We have coordinated our range of PARLOK mudguards to a conversion list, TYRE / MUDGUARD, where the entry key is the tyre dimension, followed by the PARLOK-code number for the most suitable mudguard to meet the Council Regulation (CR 109/2011/EU) of 27 January 2011.

Please note that space requirements or manufacturer's standards may necessitate the use of a slightly smaller or larger mudguard than the one suggested by us.

We hope that this conversion list will make it easier for you and many other users of PARLOK mudguards to choose the correct mudguard for a specific type of tyre.

Wir haben unser Lieferprogramm Parlok Kotflügel in einer Umschlüsselungsliste zusammengefaßt. Der Schlüssel für diese Liste ist die Reifengröße, gefolgt von der Artikelnummer für die Kotflügel die am ehesten der Verordnung (VO 109/2011/EU) vom 27.1.2011 entsprechen.

Bitte berücksichtigen Sie, daß die Platzverhältnisse oder der Fertigungsstandard es erfordern können, daß kleinere oder größere Kotflügel als von uns vorgeschlagen benötigen werden. Wir werden Sie gern entsprechend beraten.

Wir hoffen, daß diese Umschlüsselungsliste es Ihnen und vielen anderen Anwendern von Parlok Kotflügeln erleichtern wird den richtigen Parlok Kotflügel für Ihr spezielles Fahrzeug zu ermitteln.

Nous avons arrangé la présentation de notre gamme d'ailes PARLOK en un tableau de correspondance, PNEUMATIQUE / AILE, où le critère d'entrée est la taille du pneumatique, suivie de la référence PARLOK pour l'aile la mieux adaptée à la Réglementation Européenne (CR 109/2011/EU) du 27 janvier 2011.

Nous vous prions de noter que les impératifs d'espace ou les standards des constructeurs peuvent nécessiter l'emploi d'ailes légèrement plus étroites ou plus larges que le type suggéré sur le tableau.

Nous espérons que ce le tableau de correspondance vous rendra plus aisé le choix de vos ailes PARLOK afin d'offrir à vos clients la meilleure solution.

pour différentes ailes
Réalisation auto-nettoyante
Suppression efficace des projections d'eau
Léger
Installation aisée dans des ailes existantes
par boulonnage ou rivetage
Matière: HDPE

REFERENCES TO THE COUNCIL REGULATION (EU) of 27 January 2011 on the approximation of laws of the Member States relating to the spray-suppression system of certain categories of motor vehicles and their trailers (91/226/EEC, 2010/19/EU, CR 109/2011/EU).

WHICH VEHICLES?

All tractors and rigid vehicles usable for carriage of goods having a maximum mass exceeding 7,5 tonnes and all **trailers** with a maximum weight exceeding 3,5 tonnes: must be constructed and/or fitted with spray suppression systems or devices (certain vehicles as unbodied vehicles, "off road" vehicles etc. are excepted).

WHAT IS THE SPRAY SUPPRESSION SYSTEM OR DEVICE?

Spray-suppression system reduces the pulverization of water thrown by tyres from wet road. The spray suppression system can be made up of a mudguard part and a rain flap part equipped with a spray-suppression device.

Spray-suppression device is a component forming part of the mudguard and/or rain flap and it absorbs the energy of water spray.

MEASUREMENTS OF THE SYSTEM?

The width of the mudguard part and the flap part must cover the entire width of the tyre specified by the tyre manufacturer.

The front edge must extend no more than 45° above the axle line with non-steered wheels.

Depth of the outer valance must extend not less than 45 mm at all points behind a vertical line passing through the center of the wheel.

Spray suppression device

The back side of the rear part of the system must be fitted with a spray-reduction device. This material must cover the inside of the system up to a height determined by a straight line running from the centre of the wheel and forming an angel of at least 30° with the horizontal. The lower rear edge of the spray-suppression system must not be more than 200 mm, in special cases 300 mm, from the ground.

(a) Multiple axes where the distance between the tyres is less than 250 mm.

EXAMPLE 1. Non steered wheels, distance between tyres 250 mm or more.

EXAMPLE 2. Non steered wheels distance between tyres less than 250 mm.

2.0.2. I E

EXTRAIT DE LA RÉGLEMENTATION EUROPÉENNE du 27 janvier 2011 concernant le rapprochement des législations des états membres relative aux systèmes anti-projections d'eau de certaines catégories de véhicules et de leurs remorques (91/226/EEC, 2010/19/EU, CR 109/2011/EU).

QUELS VÉHICULES ?

Tous les tracteurs et véhicules porteurs utilisés pour le transport de marchandises et ayant un poids maximum supérieur à 7,5 tonnes plus toutes les remorques d'un poids maximum supérieur à 3,5 tonnes doivent être équipés de systèmes anti-projections.
(Certains véhicules: chassis-cabine, tous-terrains, non carrossés, sont exemptés.)

DE QUOI S'AGIT-IL ?

Le système anti-projections réduit la pulvérisation de l'eau provoquée par les pneumatiques sur route mouillée. Le système est constitué d'une aile et d'une bavette anti-projections.

Le système anti-projections doit faire partie de l'aile et/ou de la bavette et doit absorber l'énergie de l'eau projetée.

CARACTÉRISTIQUES DU SYSTÈME.

La largeur de l'aile et de la bavette doit être supérieure à la largeur du pneumatique correspondant.

L'angle formé par le bord avant de l'aile et l'axe de la roue ne doit pas être inférieur à 45° pour des roues fixes.

Le bord intérieur de l'aile doit être situé à une distance inférieure ou égale à 1,5 fois le rayon du pneumatique pour les roues directrices ou auto vireuses, à une distance inférieure ou égale à 1,25 fois.

La partie arrière de l'aile doit être équipée intérieurement d'un matériel anti-projections. Ce matériel doit couvrir l'intérieur de l'aile jusqu'à une hauteur formant un angle de 30° par rapport à l'axe horizontal de la roue. La limite inférieure du système anti-projections doit être au maximum à 200 mm, dans des cas particuliers à 300 mm, du sol.

(a) Multiple axles where the distance between the axles is less than 250 mm.

EXEMPLE 1. Roues non directrices, distance entre les pneumatiques 250 mm ou plus.

EXEMPLE 2. Roues non directrices, distance entre les pneumatiques inférieure à 250 mm.

2.0.3. I.E.E.

ERLÄUTERUNGEN ZUR VERORDNUNG (EU) vom 27.1.2011
die als Grundlage dient für die Gesetze der Mitgliedsländer hinsichtlich der Einführung von
Spritzschutzsystemen an bestimmten Kategorien von Motorfahrzeugen und Anhängern
(91/226/EWG, 2010/19/EU, VO 109/2011/EU).

WELCHE FAHRZEUGE SIND BETROFFEN?

Alle Zugmaschinen und Lastkraftwagen mit einem Gesamtgewicht über 7,5 to und alle Anhänger mit einem Gesamtgewicht über 3,5 to müssen mit einem Spritzschutzsystem ausgerüstet sein. (Bestimmte Fahrzeuge, bei denen Spritzschutzsysteme nicht möglich oder nicht sinnvoll sind, sind ausgenommen).

WAS IST EIN SPRITZSCHUTZSYSTEM?

Das Spritzschutzsystem reduziert die Sprühnebelbildung des durch Reifen aufgewirbelten Wassers von einer nassen Straße.

Das Spritzschutzsystem besteht aus dem Kotflügel und der Spritzklappe, die mit einer Spritzschutzwirkfläche belegt sind. Die Spritzschutzwirkfläche ist so konzipiert, daß sie die Energie der Spritzwassers absorbiert.

ERFORDERLICHE MAßE DES SYSTEMS

Die Breite des Kotflügels oder der Spritzschutzeinrichtung muß mindestens der Breite des Reifens entsprechen.

Die Vorderkante des Kotflügels muß bei maximal 45° über der Achsenlinie beginnen.

Der Abstand Innenkante Kotflügel zu Achse darf nicht über 1,25 x Reifenradius bei nicht gelenkten Rädern und 1,5 bei gelenkten Rädern betragen. Höhe der Kotflügelseitenkante zur Kotflügelinnenfläche muß mindestens 45 mm betragen.

Die hintere Innenseite des Kotflügels muß belegt sein mit einer Spritzschutzwirkfläche. Diese Material muß angebracht sein ab einer Höhe von mindestens 30° über der Achsenlinie. Der Abstand Unterkante der Spritzschutzwirkfläche zur Aufstandfläche muß 200 mm, in Spezialfällen 300 mm, oder kleiner sein.

(a) Multiple axes where the distance between the tyres is less than 250 mm.

Beispiel 1. Nicht gelenkte Räder. Abstand zwischen den Reifenlaufflächen 250 mm oder mehr.

Beispiel 2. Nicht gelenkte Räder, Abstand zwischen den Reifenlaufflächen weniger als 250 mm.

TOOLBOXES

PARLOK TOOLBOXES

Made from high quality polyethylene (HDPE)
 100 % recyclable material
 Modern design and light in weight
 Easy to fit
 Wide range and logo service available
 Lockable with a multipoint rotary lock
 or with a padlock hasp.
 High impact resistance.
 Temperature and chemical resistant.
 Does not need painting, will not rust.
 Approved by KBA as lateral protection device
 according to Council Regulation No. 73.
 Approval Mark: **E1 73R - 010075.**

PARLOK WERKZEUGKÄSTEN

Hergestellt aus stoss- und schlagfestem PE
 100 % wiederverwertbar
 Modernes Design und geringes Eigengewicht
 Einfache und schnelle Montage
 In verschiedenen Grössen
 Mit Logo lieferbar
 Abschliessbar mit Drehriegelverschluss
 oder mit Vorbereitung für Vorhängeschloss.
 Stabil, auch bei extremen Temperaturen.
 Beste chemische Beständigkeit.
 Keine Lackierung nötig, keine Korrosion.
 Genehmigung vom KBA als Einrichtung für den Seitenschutz
 nach der Regelung Nr. 73.
 Genehmigungszeichen: **E1 73R - 010075.**

COFFRES À OUTILS DE PARLOK
